

SUPPLEMENTARY INFORMATION

Methodology

This section explains the boundaries, methodologies and assumptions used in the computation of MIT's sustainability data and information.

Employees

- Employees are defined as individuals who are employed by the Mapletree Group, according to national law. The Manager and Property Manager are wholly-owned subsidiaries of the Mapletree Group. Employees include the management teams and employees of the Manager and Property Manager who are based in Singapore, the United States and Japan and do not include workers who are non-employees (e.g., third-party service providers).
- New hires are defined as employees who joined the organisation during the financial year. The annual new hire rate is represented as the number of new hires over the average number of employees in the financial year and expressed as a percentage.
- Turnovers are defined as employees who left the organisation during the financial year. The annual turnover rate is represented as the number of turnovers over the average number of employees in the financial year and expressed as a percentage.
- The methodology for calculating return-to-work rate was revised in FY24/25; and therefore, it differs from FY23/24. In FY23/24, the return-to-work rate referred to the ratio of employees who returned to work after parental leave to those who took parental leave. In FY24/25, it reflects the ratio of employees who returned to work during FY24/25 to those who were due to return to work in FY24/25 after taking parental leave. This updated methodology will be used for future reporting.
- Due to data availability, parental leave data reported pertains to employees based in Singapore.
- The average training hours per employee is represented by the total number of training hours undertaken by employees divided by the average headcount at three points in time – the beginning, the middle and the end of the financial year.

Occupational health and safety

- Work-related injuries are defined as a negative impact on an employee's health arising from exposure to hazards at work. Injuries as a result of commuting incidents are only included if the transport was organised by the Manager and Property Manager.
- High-consequence work-related injuries are defined as fatal or major work-related injuries that result in an injury from which the worker cannot, does not, or is not expected to recover fully to pre-injury health status within six months.
- Recordable work-related injuries refer to all work-related injuries resulting in at least four days of medical leave.
- Hazards are defined as per the guidelines by MOM on types of Dangerous Occurrences.
- Health and safety data reported include employees of the Manager and Property Manager who are based in Singapore, the United States and Japan and do not include workers who are non-employees (e.g., third-party service providers).
- Rate of work-related injuries and rate of high-consequence work-related injuries are computed based on 1,000,000 man-hours worked.
- Absentee rate is defined as absentee days (medical leave) divided by scheduled work days.
- Lost day rate is defined as days lost to occupational injury divided by scheduled work days.

Overview of environmental data

- Unless stated otherwise, environmental data reported only includes landlord and tenant operational data for assets in operation for which consumption data are available.
- For assets reporting less than 12 months of data, estimations are made to annualise the data to 12 months. This is also applied for reporting of IFRS S2 Volume 36 – Real Estate Metrics.
- Where listed energy rating certified floor area differs from the GFA of the asset, the latter is adopted for IFRS S2 Volume 36 Real Estate energy rating metrics calculations.

Energy

- The most significant form of energy consumed relates to purchased electricity from the grid and includes the electricity consumption (the numerator) in common areas and shared services.
- Fuel heating values are primarily derived from higher heating values reported by US EPA Mandatory Greenhouse Gas Reporting Rule.
- Building electricity intensity is derived by taking into consideration GFA/NLA and occupancy rates for the denominator.
- Estimates for energy reduction are carried out based on the specifications of the equipment installed or replaced.

Connectedness of climate-related disclosures with financial statements

- MIT's climate-related financial disclosures pertain to MIT, the same reporting entity as the related consolidated financial statements on page 116 of the Annual Report 2024/2025. Unless stated otherwise, the underlying properties are consistent across both reports.
- In line with the operational control approach of the GHG Protocol, Scope 1, Scope 2, and Scope 3 Categories 1, 2, 5, 8 and 13 GHG emissions, as well as the assets in the climate risk assessment (and to be consistent, other environmental data) relate to properties owned by entities that it consolidates in the financial statements as well as its associated companies and joint ventures that it manages, and are expressed on a 100% basis.
- The underlying expenditure data from the consolidated financial statements for FY24/25 has been utilised to calculate the Scope 3 Category 1 and 2 GHG emissions using the spend method, except for development projects (see GHG emissions).
- Current financial effects presented in the Climate-related Risks and Opportunities section of the Sustainability Report are consistent with the financial information underlying the consolidated financial statements.

GHG emissions

- Direct (Scope 1) emissions are calculated using emission factors and global warming potential rates from the 2006 IPCC Guidelines for National Greenhouse Gas Inventories, The Department for Environment, Food and Rural Affairs (DEFRA) 2024 data, and the IPCC Sixth Assessment Report. Gases included in fuel emissions calculation are carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O). Scope 1 Industrial Process and Product Use ("IPPU") emissions include HFC/HCFC refrigerants and lubricant oil use. Most of the properties' emissions come from the use of electricity for lighting, air-conditioning systems and lifts which are classified energy indirect (Scope 2) GHG emissions.
- A location-based method is adopted to reflect the average emissions intensity of Singapore's grid. The emission factors used are obtained from the Singapore Energy Statistics published by the Energy Market Authority. The Manager adopted grid emission factor calculated using the Average Operating Margin method.

Year	Average Operating Margin (kg CO ₂ / kWh)	Source
FY22/23	0.4057	Electricity Grid Emission Factor and Upstream Fugitive Methane Emission Factor, Energy Market Authority (EMA), 2005 – 2021, October 2022
FY23/24	0.4168	Electricity Grid Emission Factor and Upstream Fugitive Methane Emission Factor, Energy Market Authority (EMA), 2005 – 2022, October 2023
FY24/25	0.4120	Electricity Grid Emission Factor and Upstream Fugitive Methane Emission Factor, Energy Market Authority (EMA), 2005 – 2023, October 2024

- The emissions factors for the United States are obtained from the United States Environmental Protection Agency's ("EPA") 2023 eGRID data. The specific eGRID subregion for each asset is obtained using the EPA's online Power Profiler resource.
- GHG emissions intensity is derived where the numerator is the total energy indirect (Scope 2) GHG emissions, and the denominator is calculated considering GFA/NLA and occupancy rates.
- Scope 3 is derived from other indirect emissions of MIT's key operational activities. The emission factors used include US EPA Supply Chain GHG Emission Factors v1.2 (Categories 1, 2) and DEFRA 2024 (Categories 5, 6, 7, 12). Meanwhile, the emission factors used in Scope 1 and 2 are also applied to Category 13.
- Category 1 and 2 include (a) embodied carbon data for projects under development ("PUD") - based on emissions pertaining to key construction materials, and computed when the PUD is completed ; and (b) spend-based method for purchased goods and services and capital goods, excluding PUDs, based on FY24/25 financial data, as primary data is not available.
- Category 5 includes GHG emissions from waste generation from operational assets.
- Category 8 includes GHG emissions of Mapletree's offices rented from third parties.
- Category 13 includes GHG emissions from the consumption of fuel, IPPU and electricity by tenants, based on data availability

Climate risk model: assumptions and limitations

- For physical risks, the analysis considers asset coordinates, elevation data, and forecasted changes in local weather patterns but does not take into account asset-specific protection measures. The model is unable to calculate detailed financial impacts such as decrease in asset valuation (other than potential asset damage cost), increases in insurance premiums, or rises in energy prices. The assessment for FY24/25 is more nuanced due to the availability of improved elevation information.
- For transition risks, the model utilises an asset's current energy use intensity values and assumes constant emissions intensities when calculating transition cVAR for future time frames. Carbon prices in the model were revised from the previous year's assessment, which led to an increase in transition cVAR.

Water

- Water withdrawal (the numerator) is defined as the total sum of water withdrawn for use. This includes third-party water. Municipal water sourced from Singapore's PUB comprises tap water and NEWater. Public water systems in the United States are often supplied by surface water or ground water.

Source of Water	Description	Boundary
Potable Water	Singapore's tap water supply comprises a mix of four sources – (i) water from local catchment; (ii) imported water; (iii) desalinated water; and (iv) NEWater.	All of MIT's properties in Singapore
	United States' tap water supply comprises either surface water or ground water.	All of MIT's properties in the United States
NEWater	NEWater is high-grade reclaimed water produced from treated used water that is further purified using advanced membrane technologies and ultra-violet disinfection.	K&S Corporate Headquarters and 1 & 1A Depot Close

- Singapore's quality of drinking water is regulated by the Environmental Public Health ("EPH") (Water Suitable for Drinking) (No.2) Regulations 2019. The drinking water standards set out under the EPH Regulations and GRI's definition of freshwater were based on the World Health Organisation Guidelines for Drinking-water Quality (≤1,000 mg/L Total Dissolved Solids).
- The Safe Drinking Water Act ("SDWA") is the main federal law that ensures the United States' quality of drinking water. Under SDWA, the Environmental Protection Agency sets standards for drinking water quality and oversees the states, localities, and water suppliers who implement those standards.
- Building water intensity is derived by taking into consideration GFA/NLA and occupancy rates for the denominator.
- Water stress is determined using the WRI Aqueduct Water Risk Atlas, which measures baseline water stress as the ratio of total water demand to available renewable surface and groundwater supplies. Areas where this ratio is categorised as "High" or "Extremely High" are considered to be water-stressed areas.

Waste

- Waste is defined as anything that the holder discards, intends to discard, or is required to discard.

418-1	Substantiated complaints concerning breaches of customer privacy and losses of customer data	Ethical Business Conduct and Regulatory Compliance - Compliance with Laws and Regulations	31
		Cybersecurity and Data Privacy - Management Approach	32

ISSB IFRS S1 and S2 Climate-related Disclosures Content Index¹⁶

In the contents index below, applicable requirements per the ISSB “IFRS S2 Climate-related Disclosures” standard are specified. Additionally, the “IFRS S1 General Requirements for Disclosure of Sustainability-related Financial Information” standard has been adopted to the extent that it applies to climate-related disclosures in line with the requirements set by the Singapore Exchange. Consistent with the provisions of IFRS S2, in identifying the climate-related risks and opportunities that could reasonably be expected to affect its prospects, MIT has also considered the applicability of the IFRS S2 Real Estate standard.

Code	Disclosure Description	Location
IFRS S1 GENERAL REQUIREMENTS AND S2 CLIMATE-RELATED DISCLOSURES		
Conceptual Foundations		
S1.17; S1.B32	Materiality - An entity shall disclose material information about the climate-related risks and opportunities that could reasonably be expected to affect the entity's prospects.	Climate-related Risks and Opportunities (Pages 17 - 19)
S1.20	Reporting entity - An entity's climate-related financial disclosures shall be for the same reporting entity as the related financial statements.	Connectedness of Climate-Related Disclosures with Financial Statements (Page 33)
S1.21-24; S1.B42(a),(c)	Connected information - An entity shall provide information in a manner that enables users of general-purpose financial reports to understand the connections between the items to which the information relates and the connections between disclosures provided by the entity.	Economic Performance (Page 9) Climate-related Risks and Opportunities (Pages 17 - 19) Connectedness of Climate-Related Disclosures with Financial Statements (Page 33) Annual Report - Corporate Governance (Pages 83 - 104) Annual Report - Risk Management (Pages 105 - 107) Annual Report - Financial Statements (Pages 113 - 202)
Governance		
S2.05-07	Governance - The objective of climate-related financial disclosures on governance is to enable users of general-purpose financial reports to understand the governance processes, controls and procedures an entity uses to monitor, manage and oversee climate-related risks and opportunities.	Sustainability Governance (Pages 3 - 4) Climate-related Risks and Opportunities (Pages 17 - 19) Annual Report - Corporate Governance (Pages 83 - 104)
Strategy		
S2.08; S2.10; S2.12	Climate-related risks and opportunities - The objective of climate-related financial disclosures on strategy is to enable users of general-purpose financial reports to understand an entity's strategy for managing climate-related risks and opportunities.	About the Report (Page 2) Climate-related Risks and Opportunities (Pages 17 - 19)
S2.13	Business model and value chain - An entity shall disclose information that enables users of general-purpose financial reports to understand the current and anticipated effects of climate-related risks and opportunities on its business model and value chain.	Climate-related Risks and Opportunities (Pages 17 - 19)

Code	Disclosure Description	Location
S2.14	Strategy and decision-making - An entity shall disclose information that enables users of general-purpose financial reports to understand the effects of climate-related risks and opportunities on its strategy and decision-making.	Material Topics, Targets and Performance (Pages 5 - 6) Strong Partnerships (Pages 10 - 11) Climate-related Risks and Opportunities (Pages 17 - 19) Towards Net Zero (Page 20)
S2.15; S2.16; S2.21	Financial position, financial performance and cash flows - An entity shall disclose information that enables users of general-purpose financial reports to understand the current and anticipated effects of climate-related risks and opportunities on its financial position, financial performance and cash flows for the reporting period.	Climate-related Risks and Opportunities (Pages 17 - 19)
S1.22; S2.22; S2.23	Climate resilience - An entity shall disclose information that enables users of general-purpose financial reports to understand the resilience of the entity's strategy and business model to climate-related changes, developments and uncertainties, taking into consideration its identified climate-related risks and opportunities. The entity shall use climate-related scenario analysis to assess its climate resilience using an approach that is commensurate with its circumstances. In providing quantitative information, the entity may disclose a single amount or a range.	About the Report (Page 2) Climate-related Risks and Opportunities (Page 17 - 19) Climate Risk Model: Assumptions and Limitations (Page 33) Connectedness of Climate-Related Disclosures with Financial Statements (Page 33)
Risk Management		
S2.24-26	Risk management - The objective of climate-related financial disclosures on risk management is to enable users of general-purpose financial reports to understand an entity's processes to identify, assess, prioritise and monitor climate-related risks and opportunities, including whether and how those processes are integrated into and inform the entity's overall risk management process.	Climate-related Risks and Opportunities (Pages 17 - 19) Annual Report - Risk Management (Pages 105 - 107)
Metrics and Targets		
S1.53; S2.27	General requirements - The objective of climate-related financial disclosures on metrics and targets is to enable users of general-purpose financial reports to understand an entity's performance in relation to its climate-related risks and opportunities, including progress towards any climate-related targets it has set, and any targets it is required to meet by law or regulation.	Material Topics, Targets and Performance (Pages 5 - 6)
S2.29a(i); S2.29a(iii-vi); S2.B56	Greenhouse gases - An entity shall disclose information relevant to the cross-industry metric category of greenhouse gas emissions generated during the reporting period.	Energy and Climate Change (Pages 14 - 16) Connectedness of Climate-Related Disclosures with Financial Statements (Page 33)
S2.29(b)-(g); S2.30; S2.B64	Other cross-industry metrics - An entity shall disclose the cross-industry metric categories of climate-related physical risks, transition risks, opportunities, capital deployment, internal carbon prices and remuneration, considering the aspects included in S2.B65. In preparing disclosures to meet the requirements in paragraph 29(b)-(d), an entity shall use all reasonable and supportable information that is available to it at the reporting date without undue cost or effort.	Climate-related Risks and Opportunities (Pages 17 - 19)
S2.32	Industry-based metrics - An entity shall disclose industry-based metrics that are associated with particular business models, activities or other common features that characterise participation in an industry. In determining the industry-based metrics that the entity discloses, the entity shall refer to and consider the applicability of the industry-based metrics associated with disclosure topics described in the Industry-based Guidance on Implementing IFRS S2.	About the Report (Page 2) Integrating Sustainability into Remuneration (Page 4)

¹⁶ The ISSB IFRS requirements have been adopted to the extent that it applies to (i) climate-related disclosures in line with the requirements set by SGX; and (ii) its applicability to MIT.

Code	Disclosure Description	Location
S1.49	Entity-specific metrics - An entity shall provide disclosures about metrics taken from a source other than IFRS Sustainability Disclosure Standards.	About the Report (Page 2)
S2.33-37	Climate-related targets - An entity shall disclose the quantitative and qualitative climate-related targets it has set to monitor progress towards achieving its strategic goals, and any targets it is required to meet by law or regulation, including any greenhouse gas emissions targets. In identifying and disclosing the metrics used to set and monitor progress towards reaching a target described in S2.33–34, an entity shall refer to and consider the applicability of cross-industry metrics and industry-based metrics, including those described in an applicable IFRS Sustainability Disclosure Standard, or metrics that otherwise satisfy the requirements in IFRS S1.	Sustainability Governance (Pages 3 - 4) Material Topics, Targets and Performance (Pages 5 - 6) Energy and Climate Change (Pages 14 - 16) Towards Net Zero (Page 20)
General Requirements		
S1.54; S1.55a; S1.56; S1.58a; S1.59	Sources of Guidance - In identifying climate-related risks and opportunities that could reasonably be expected to affect an entity's prospects, an entity shall apply IFRS Sustainability Disclosure Standards. In identifying applicable disclosure requirements about a sustainability-related risk or opportunity that could reasonably be expected to affect an entity's prospects, an entity shall apply the IFRS Sustainability Disclosure Standard that specifically applies to that sustainability-related risk or opportunity. In addition to the IFRS Sustainability Disclosure Standards, an entity shall refer to and consider the applicability of the disclosure topics in the SASB standards for the identification of climate-related risks and opportunities. In the absence of an IFRS Sustainability Disclosure Standard that specifically applies to a sustainability-related risk or opportunity, the entity shall refer to and consider the applicability of the metrics associated with the disclosure topics included in the SASB standards.	About the Report (Page 2)
S1.60; S1.62; S1.B47	Location of disclosures - An entity is required to provide disclosures required by IFRS Sustainability Disclosure Standards as part of its general-purpose financial reports.	Connectedness of Climate-Related Disclosures with Financial Statements (Page 33)
S1.64	Timing of reporting - An entity shall report its climate-related financial disclosures at the same time as its related financial statements and cover the same reporting period as the related financial statements.	About the Report (Page 2) GRI Content Index (Page 37)
S1.70, S1.B53	Comparative information - An entity shall disclose comparative information in respect of the preceding period for all amounts and other relevant information disclosed in the reporting period.	Energy and Climate Change (Pages 14 - 16)
S1.72	Statement of compliance - An entity whose climate-related financial disclosures comply with all the requirements of IFRS Sustainability Disclosure Standards shall make an explicit and unreserved statement of compliance.	About the Report (Page 2)
Judgements, Uncertainties and Errors		
S1.74	Judgements - An entity shall disclose information about the judgements that it has made in the process of preparing its climate-related financial disclosures.	Climate-related Risks and Opportunities (Pages 17 - 19)
S1.77; S1.78	Measurement uncertainty - An entity shall disclose information about the most significant uncertainties affecting the amounts reported in its climate-related financial disclosures.	Climate-related Risks and Opportunities (Pages 17 - 19) Climate Risk Model: Assumptions and Limitations (Page 33) Connectedness of Climate-Related Disclosures with Financial Statements (Page 33)

Code	Disclosure Description	Location
S1.83; S1.B58(a)-(b)	Errors - An entity shall correct material prior period errors by restating the comparative amounts for the prior period(s) disclosed unless it is impracticable to do so.	GRI Content Index (Page 37)
IFRS INDUSTRY-BASED GUIDANCE ON CLIMATE-RELATED DISCLOSURES (VOL. 36 REAL ESTATE)		
Energy Management		
IF-RE-130a.1	Energy consumption data coverage as a percentage of total floor area, by property sector.	Key ESG Data Summary (Page 35)
IF-RE-130a.2	(1) Total energy consumed by portfolio area with data coverage, (2) percentage grid electricity and (3) percentage renewable, by property sector.	Key ESG Data Summary (Page 35)
IF-RE-130a.4	Percentage of eligible portfolio that (1) has an energy rating and (2) is certified to ENERGY STAR, by property sector.	11% of data centres certified to ENERGY STAR
IF-RE-130a.5	Description of how building energy management considerations are integrated into property investment analysis and operational strategy.	Economic Performance (Page 9)
Water Management		
IF-RE-140a.1	Water withdrawal data coverage as a percentage of (1) total floor area and (2) floor area in regions with High or Extremely High Baseline Water Stress, by property sector.	Key ESG Data Summary (Page 35)
IF-RE-140a.2	(1) Total water withdrawn by portfolio area with data coverage and (2) percentage in regions with High or Extremely High Baseline Water Stress, by property sector.	Key ESG Data Summary (Page 35)
IF-RE-140a.4	Description of water management risks and discussion of strategies and practices to mitigate those risks.	Water Management (Pages 21 - 22)
Management of Tenant Sustainability Impacts		
IF-RE-410a.3	Discussion of approach to measuring, incentivising and improving sustainability impacts of tenants.	Strong Partnerships (Pages 10 - 11)
Climate Change Adaptation		
IF-RE-450a.2	Description of climate change risk exposure analysis, degree of systematic portfolio exposure, and strategies for mitigating risks.	Climate-related Risks and Opportunities (Pages 17 - 19)
Activity Metrics		
IF-RE-000.A	Number of assets, by property sector.	Key ESG Data Summary (Page 34)
IF-RE-000.B	Leasable floor area, by property sector.	Key ESG Data Summary (Page 34)
IF-RE-000.C	Percentage of indirectly managed assets, by property sector.	Key ESG Data Summary (Page 34)
IF-RE-000.D	Average occupancy rate, by property sector.	Key ESG Data Summary (Page 34)
